2020 CERTIFICATION

Consumer Confidence Report (CCR)

Cason Water District

Public Water System Name

048-0019

List PWS ID #'s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR.

CCR DISTRIBUTION (Check all boxes that apply.)

INDIRECT DELIVERY METHODS (Attach copy of publication, water bill or other)	DATE ISSUED
<input checked="" type="checkbox"/> Advertisement in local paper (Attach copy of advertisement)	4-21-21
<input type="checkbox"/> On water bills (Attach copy of bill)	
<input type="checkbox"/> Email message (Email the message to the address below)	
<input type="checkbox"/> Other _____	
DIRECT DELIVERY METHOD (Attach copy of publication, water bill or other)	DATE ISSUED
<input type="checkbox"/> Distributed via U. S. Postal Mail	
<input type="checkbox"/> Distributed via E-Mail as a URL (Provide Direct URL): _____	
<input type="checkbox"/> Distributed via E-Mail as an attachment	
<input type="checkbox"/> Distributed via E-Mail as text within the body of email message	
<input type="checkbox"/> Published in local newspaper (attach copy of published CCR or proof of publication)	
<input type="checkbox"/> Posted in public places (attach list of locations)	
<input type="checkbox"/> Posted online at the following address (Provide Direct URL): _____	

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the MSDH, Bureau of Public Water Supply.

CCR DEADLINE TO MSDH & CUSTOMERS: BY JULY 1, 2021

2020 Annual Drinking Water Quality Report 2021 APR 15 AM 7:12

Cason Water District
PWS#: 0480019
April 2021

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies.

If you have any questions about this report or concerning your water utility, please contact Donald Young at 662.397.0183. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at the annual meeting scheduled for August 17, 2021 at 7:00 PM at the Cason Water Office located at 30007 Cason Road, Nettleton, MS 38858

Our water source is from wells drawing from the Eutaw-McShan & Gordo Aquifers. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for our system have received a lower to moderate ranking in terms of susceptibility to contamination.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2020. In cases where monitoring wasn't required in 2020, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measure-ment	MCLG	MCL	Likely Source of Contamination
-------------	---------------	----------------	----------------	---	-------------------	------	-----	--------------------------------

Inorganic Contaminants

10. Barium	N	2019*	.2313	.0903 - .2313	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2019*	5.4	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2016/18*	.2	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2019*	.113	.1 - .113	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2016/18*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019*	19000	7200 - 19000	ppb	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.

Disinfection By-Products

82. TTHM [Total trihalomethanes]	N	2016*	1.07	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2020	.6	.5 - .7	mg/l	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2020.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

Our system works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

RECEIVED - WATER SUPPLY 2020 Annual Drinking Water Quality Report

Voters in Nettleton and Amory Ward 2 voters will participate in races in the April 27 Democratic primary runoffs. Polls will be open from 7 a.m. until 7 p.m.

In Amory, the polling place is the Old National Guard Armory, located at 101 9th St. S.

For Nettleton, Wards 3 and 4 vote at the Old National Guard

Amory, located at 116 Johnson St. Wards 1 and 2 vote at First Methodist Church Christian Life Center, located at 160 Verona Ave. Nettleton's alderman-at-large runoff is between Herbert Arnold and Sammy John Raper. Raper received 245 votes, or 37 percent, to Arnold's 217 votes, or 33 percent in the April 6 primaries. The third candidate in the primary, Nathan Moore, received 195 votes, or 30 percent.

The winner between Arnold and Raper will be sworn in as alderman-at-large this summer. For Amory's Ward 2 alderman race, Edsel 'Blade' Hampton will face Barry Woods Sr. in the runoff. Woods received 110 votes, or 41 percent, to Hampton's 90 votes, or 33 percent April 6. Other candidates in the race were John L. Ezell, who received 46 votes, or 17 percent, and James E. Whitfield, who received 21 votes, or 30 percent.

otes, or eight percent.

"Sometimes there is not a clear winner of the primary. Sometimes, as in this instance, a runoff necessary between two contestants of the same party to narrow down to one contestant for the next election," said Amory City Clerk Jamie Morgan.

Registered and active voters of Ward 2 can vote Democratic for the Ward 2 runoff election April 1 and still vote for any party in the general election in June 8. On the general election, parties are not of consequence.

Morgan gave an explanation about the primary process.

"Primaries are set up to determine who is the best of each party - Democratic and Republican - as voted on by the voters. The winner of the primary will represent the Democratic or Republican party in the general election June 8," Morgan said.

The winner between Arnold and Raper will be sworn in as alderman-at-large this summer. For Amory's Ward 2 alderman race, Edsel 'Blade' Hampton will face Barry Woods Sr. in the runoff. Woods received 110 votes, or 41 percent, to Hampton's 90 votes, or 33 percent April 6. Other candidates in the race were John L. Ezell, who received 46 votes, or 17 percent, and James E. Whitfield, who received 21 votes, or 30 percent.

1992 Academy Award-winning film and the 2014 hit Broadway show.

Miller was quick to pay tribute to the team with whom she works behind the scenes.

"Serena Coleman will be

was provided by the Amory School Board. Groups from the other Amory schools will not be permitted to attend matinee performances, but they will be able to view the show remotely as it is livestreamed.

"We haven't had anything like this for them for a long time," Miller said. All performances will be at the Amory High School Auditorium. Seating capacity restrictions have recently been increased to half capacity.

A black and white photograph capturing a group of individuals in what appears to be a formal meeting or presentation. The scene is set in an indoor room with a wall decorated by several framed pictures. In the center, a table is draped with a patterned cloth and holds numerous papers, maps, or charts. Several men are leaning over the table, examining these documents closely. One man, positioned in the lower-left foreground, is seen from the side, wearing a dark jacket over a light-colored shirt. Another man, located in the upper-middle portion of the frame, is dressed in a dark suit and tie and is gesturing with his hands as if speaking or explaining something. The overall atmosphere suggests a professional or academic setting where important information is being discussed or reviewed.
